

Loop Control Instructions

To repeat some parts of the program

for Loop

```
for(initialisation; condition; updation) {
```

```
//do something
```

```
}
```

Special Things

- Increment Operator
- Decrement Operator
- Loop counter can be float
or even character
- Infinite Loop

while Loop

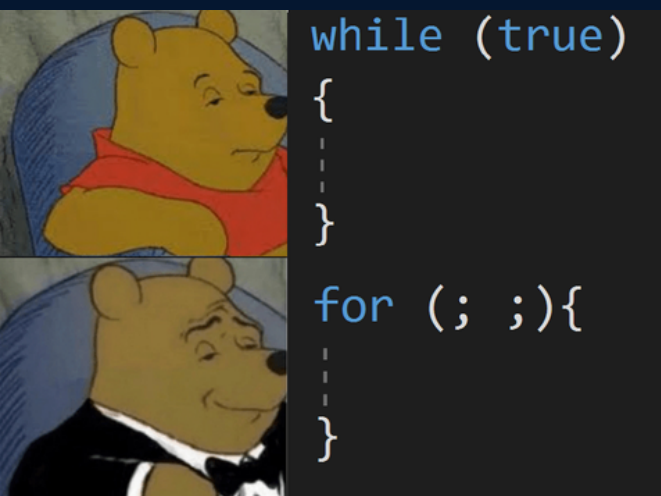

```
while(condition) {
```

```
//do something
```

```
}
```

A

while (1) means true

```
while (true)
{
  ...
}
for (; ;){
  ...
}
```

do while Loop

```
do {
```

```
//do something
```

```
} while(condition);
```

do madhye apalyalya kay execute karayachya aahe te lihato and updation lihto ani while madhye condition lihto

break Statement

exit the loop

when we have to break the loop
we use the statement break;

break nested loops madhun pan
baher kadhto

continue Statement

skip to next iteration

break means sagal thambva and continue means fakt aatacha thambva ani next continue kara

Nested Loops

```
for( .. ) {  
    for( .. ) {  
  
    }  
}
```
